This post is made possible by the generous of people like you and our sponsors I have an opportunity to buy a Cayin SCD-50 T for an excellent price considering it is 2 weeks old, not used but previously owned, with full warranty.. Even in the optimal condition of the 4 ohm tap in Triode mode, this was 1 6 ohms across the band; from the 8 ohm tap in Ultralinear mode, it was a very high 3.. I'm using the tube out, which means I employing the onboard DAC The noise doesn't change when different outputs are used.

As is usual for a traditional tube design, the A-50T's output impedance was high.

The low gain, however, meant that even in the worst case, with the input shorted but the volume control set to its maximum, the Cayin's signal/noise ratios (ref.. The transport is making the noise, possibly the motor, or one of the motors There isn't an option to use only the DAC with another transport, although I wish there was, because the DAC is very nice. Even in the higher-gain Ultralinear mode, it was 32 5dB from the 8 ohm tap, 30 6dB from the 4 ohm tap.. I performed a full set of tests in each mode from both sets of output taps, but discuss only a representative selection here.. Before performing any measurements, I checked the bias on each of the four output tubes; it varied from 322mV to 332mV, all well within the recommended range.. All modes and taps preserved absolute polarity The input impedance was a little lower than specification, ranging from 74k ohms at 20Hz to 59k ohms at 20kHz, but these figures are still usefully higher than average.. 350 x 350 - 38k - jpg manualslib com Cayin SCD- Sidebar 3: Measurements The Cayin A-50T has two output

transformer taps, 4 ohms and 8 ohms, and two modes of output-stage operation: Triode and Ultralinear.. 1W into 8 ohms) were excellent, at 68dB (unweighted, wideband) and 98dB (A-weighted).. 3 ohms As a result, the modification of the amplifier's frequency response by the interaction between this source impedance and the modulus of impedance of the loudspeaker load was large, at ± 2 dB with our standard simulated loudspeaker from the 8 ohm tap in Ultralinear mode (fig. ae05505a44 [Download](#) [Skype Version 6.15 For Mac](#))
